<b>LPAS</b>	<b>Self Report for Physical Activity</b>

**Please Note:** The scores below were created using the item-level data in the LPAA. These scoring algorithms were approved by the Coordinating Center. Depending on the research question and/or individual preferences, additional scores can be created using the item-level data. More specifically, if there is a lead organizer of a paper that wants the measure scored differently for a future specific MPF; then additional scores can be requested through the CSCC to meet the needs of the new analyses being proposed.

<b>Indicator for Participants that ONLY endorsed stem item 2</b>  Because item 2 (LPAA2: Hit you with something less dangerous, like a paddle, a hairbrush or a belt) is questionable for physical abuse, a dichotomous indicator was created for those participants who ONLY endorsed item 2 and NO other stem items.		
ONLY2_18	LPAA2 (corp pun.) was ONLY item endorsed	0-1
<b>Abuse SUM Scores</b>  The LPAA includes follow-up dichotomous items that are tied specifically to an epoch from combining stem items. Epochs include: 5 years old or younger; 6 to 12 years old; 13 to 16 years old; and 17 years or older. Using the dichotomous indicators (i.e., items - 13a-d, 23a-d, 33a-d, 43a-d, & 53a-d) sum scores were created, as well as whether or not the adolescent reported experiencing any physical abuse behaviors, separately for each epoch.

<b>Abuse Frequency Scores</b>  Frequency items (i.e., items – 14a-d, 24a-d, 34a-d, 44a-d, & 54a-d) were also included on the LPAA for each of the four epochs. Frequency options included: '1 or 2 times', '3 to 10 times' and 'More than 10 times'. Using the frequency items, scores were created separately for each epoch (as well as for 'ever occurred', i.e., 0-18).

<b>Perpetrators of Abuse</b>  The LPAA includes items for each epoch regarding who perpetrated the physical abuse (for each epoch). There were 11 perpetrator checkboxes per epoch (i.e., items 15a-k through items 58a-k) and they include: mother, father, stepmother, stepfather, foster mother, foster father, parent's girlfriend, parent's boyfriend, another family member or relative, teacher/coach/ minister/or someone like that, and someone else. Indicators were created for 11 perpetrators (i.e., mother, father, stepmother, stepfather, foster mother, foster father, parent's girlfriend, parent's boyfriend, another family member or relative, teacher/coach/ minister/or someone like that, and someone else) and separately for family and non-family (for each epoch).

<b>PAAS</b>	<b>Self-Report of Physical Abuse Scores</b>

**Please Note:** The scores below were created using the item-level data in the PAAA. These scoring algorithms were approved by LSPI. Depending on the research question and/or individual preferences, additional scores can be created using the item-level data. More specifically, if there is a lead organizer of a paper that wants the measure scored differently for a future specific MPF; then additional scores can be requested through the CSCC to meet the needs of the new analyses being proposed.

<b>Sum Scores and Indicators</b>  Four, non-exclusive categories of physical punishment were conceptualized. Sum scores – sum of endorsement of any items within a category, and indicator scores – 0 (no) or 1 (yes) any one of the items within a category were endorsed.  <i>Harsh Parenting:</i> items 2, 9, 10, 11 <i>Physically Abusive Parenting:</i> items 1, 3-8, & 12 <i>Abuse &amp; Harsh Punishment:</i> items 1-12 <i>Abuse without Corporal Punishment:</i> items 1, 3-12.

<b>Physical Injury Severity Score</b>  The second part of the PAAA includes items that are tied specifically to whether or not an injury occurred. For this severity score, participants who DID NOT endorse any of the stem items are coded a '0'; participants who endorse at least one of the 'a' items but NONE of the PAAAb-g items are coded a '1'; participants who endorse at least one of the 'b' items but NONE of the 'c-g' items are coded a '2'; and participants who endorse at least one of the 'c, d, e, f, or g' items are coded a '3'. More specifically, participant's injury severity scores are coded for the highest severity that they endorse. Please Note: Participants who endorsed a stem item but DID NOT endorse any of the physical injury items were coded to missing and participants who ONLY endorsed stem item 2 were set to missing.			
PHYINJ_S	Physical Injury Severity Score		0-3
<b>Perpetrators of Abuse</b>  The PAAA includes items regarding who perpetrated the physical abuse. Indicators can be created for 11 perpetrators (i.e., mother, father, stepmother, stepfather, foster mother, foster father, parent's girlfriend, parent's boyfriend, another family member or relative, teacher/coach/ minister/or someone like that, and someone else) and separately for family and non-family. For example, if any of the 'a' items (i.e., items 14,17, 20, 23, and 26) were endorsed then the indicator for Mother was coded a '1', otherwise no endorsement would be coded a '0'. If there was no endorsement of abuse then all indicators for perpetrators were set to missing.

<b>Abuse SUM Scores</b>  The PALA includes follow-up dichotomous items that are tied specifically to an epoch from combining stem items. Epochs include: 5 years old or younger; 6 to 12 years old; 13 to 16 years old; and 17 years or older. Using the dichotomous indicators (i.e., items - 13a-d, 19a-d, 25a-d, 31a-d, 37a-d, 43a-d, 49a-d, 55a-d, & 61a-d) sum scores were created, as well as whether or not the adolescent reported experiencing any physical abuse behaviors, separately for each epoch.

<b>SALS</b>	<b>Self Report for Sexual Abuse</b>

**Please Note:** The scores below were created using the item-level data in the SALA. These scoring algorithms were approved by the Coordinating Center. Depending on the research question and/or individual preferences, additional scores can be created using the item-level data. More specifically, if there is a lead organizer of a paper that wants the measure scored differently for a future specific MPF; then additional scores can be requested through the CSCC to meet the needs of the new analyses being proposed.

<b>Abuse SUM Scores</b>  The SALA includes follow-up dichotomous items that are tied specifically to an epoch from combining stem items. Epochs include: 5 years old or younger; 6 to 12 years old; 13 to 16 years old; and 17 years or older. Using the dichotomous indicators (i.e., items - 12a-d, 18a-d, 24a-d, 30a-d, 36a-d, & 42a-d) sum scores were created, as well as whether or not the adolescent reported experiencing any physical abuse behaviors, separately for each epoch.

<b>Abuse Frequency Scores</b>  Frequency items (i.e., items – 13a-d, 19a-d, 25a-d, 31a-d, 37a-d, & 43a-d) were also included on the SALA for each of the four epochs. Frequency options included: '1 or 2 times', '3 to 10 times' and 'More than 10 times'. Using the frequency items, scores were created separately for each epoch (as well as for 'ever occurred', i.e., 0-18).

<b>Perpetrators of Abuse</b>  The SALA includes items for each epoch regarding who perpetrated the Sexual abuse (for each epoch). There were 11 perpetrator checkboxes per epoch (i.e., items 14a-k through items 47a-k) and they include: mother, father, stepmother, stepfather, foster mother, foster father, parent's girlfriend, parent's boyfriend, another family member or relative, teacher/coach/ minister/or someone like that, and someone else. Indicators were created for 11 perpetrators (i.e., mother, father, stepmother, stepfather, foster mother, foster father, parent's girlfriend, parent's boyfriend, another family member or relative, teacher/coach/ minister/or someone like that, and someone else) and separately for family and non-family (for each epoch).

<p align="center"><b>Validity Scales</b></p> <p>Response Level (RL). This scale includes 10 items least likely to get a zero response. High scores may reflect a tendency toward defensiveness, a general underendorsement pattern, or a need to appear unusually symptom free. The number of '0's are counted to arrive at a raw score. Per measure author, profiles with T-scores <math>\geq 73</math> on this scale should be interpreted as invalid. Scores <math>\geq 65</math> up to and including 72 should be interpreted with caution. Note the influence of demographics regarding a higher ATR cutoff for Hispanic Respondents (<math>\geq 79</math>).</p> <p>Atypical Response (ATR). This scale includes 10 items least commonly endorsed and the most unusual or bizarre items. Items responses are summed over all 10 items. Per measure author, high scores may reflect psychosis or extreme distress, a general overendorsement, or an attempt to appear disturbed or dysfunctional. T scores <math>\geq 90</math> should be considered invalid. Scores from and including 70 – 89 demonstrate a tendency to endorse statistically unusual items. Note the influence of demographics regarding a higher ATR cutoff for African American Respondents (<math>\geq 94</math>).</p> <p>Inconsistent Response (INC). This scale consists of the sum of absolute differences on the 10 TSI item-pairs most likely to be endorsed in a consistent fashion. High scores may reflect random endorsement, attention or concentration problems, or reading/language difficulties. T-scores <math>\geq 75</math> should be considered invalid. T-scores of 65-74 show a possible inconsistent pattern of responses. Note the influence of demographics regarding a higher ATR cutoff for African American Respondents (<math>\geq 78</math>).</p>

### Clinical Scales

Clinical scales represent 10 different types of trauma-related symptoms. These symptoms can be subsumed into 4 broad categories: dysphoric mood (AA, D, AI), post-traumatic stress (IE, DA, DIS), sexual difficulties (SC, DSB), and self-dysfunction (ISR, TRB).

### Clinical Scale Raw Scores

<b>AA_RAW</b>	Anxious Arousal Raw Score	Sum (22, 27, 31, 41, 51, 54, 91, 97)	0 – 24
<b>DEP_RAW</b>	Depression Raw Score	Sum (7, 13, 17, 30, 64, 90, 98, 100)	
<b>AI_RAW</b>	Anger/Irritability Raw Score	Sum (3, 15, 34, 35, 37, 45, 57, 63, 93)	0 – 27
<b>IE_RAW</b>	Intrusive Experiences Raw Score	Sum (1, 8, 12, 62, 66, 70, 72, 74)	0 – 24
<b>DA_RAW</b>	Defensive Avoidant Raw Score	Sum (2, 4, 23, 59, 67, 83, 87, 89)	
<b>DIS_RAW</b>	Dissociation Raw Score	Sum (10, 20, 26, 29, 38, 42, 84, 85, 88)	0 – 27
<b>DSB_RAW</b>	Dysfunctional Sexual Behavior Raw Score	Sum (18, 28, 36, 46, 69, 71, 73, 76, 81)	
<b>ISR_RAW</b>	Impaired Self-Reference Raw Score	Sum (6, 16, 24, 32, 44, 55, 75, 80, 94)	
<b>TRB_RAW</b>	Tension Reduction Behavior Raw Score	Sum (25, 35, 36, 45, 46, 48, 69, 78)	0 – 24

Variable	Label	Items	Range
SC_RAW	Sexual Concerns Raw Score	Sum (9, 33, 39, 47, 52, 61, 68, 77, 95)	0 – 27
Clinical Scale T-Scores			
AA_T	Anxious Arousal T-Score	<i>Standardized T-Scores are based on sex and the conversion for the 18-54 age group. See Measures Manual for additional information regarding scoring.</i>  For all clinical scales, T-scores $\geq 65$ are considered clinically significant.	
DEP_T	Depression T-Score		
AI_T	Anger/Irritability T-Score		
IE_T	Intrusive Experiences T-Score		
DA_T	Defensive Avoidant T-Score		
DIS_T	Dissociation T-Score		
DSB_T	Dysfunctional Sexual Behavior T-Score		
ISR_T	Impaired Self-Reference T-Score		
TRB_T	Tension Reduction Behavior T-Score		
SC_T	Sexual Concerns T-Score		
Critical Items			
The TSI includes a set of 12 critical items thought to be clinically significant and would suggest the need for follow-up. It is not a validity or clinical scale.			
CRITICAL	Number of critical items with nonzero responses	Sum of the number of non-zero responses of (19, 25, 28, 30, 40, 48, 50, 58, 65, 90, 92, 99)	0 – 12

*Higher scores indicate greater distress.*

See Measure's Manual for details.

**Missing Data:** If more than 10 items are missing (non-response) from items 1-100, the measure is not scored. If fewer than 10 items overall are missing, but if more than 2 items within a subscale are missing, the subscale is set to missing, except for the RESPONSE LEVEL validity scale. For this scale, blank items are counted as '0', as are the critical items variable.

## **V. Maltreatment Data**

### **Introduction**

This document is intended to serve as the official Derived Maltreatment Data Dictionary for the LONGSCAN data for birth through age 18. This document should be considered a living document, updates and revisions will be made as necessary. Although the research staff, have reviewed the accuracy of the data provided, there may be omissions or errors that have evaded detection. We encourage you to make NDACAAN aware of any errors.

#### How to use this document

This document provides data users complete and detailed information about the variables included in the derived maltreatment dataset (M\_SDM). All of the variables within the dataset are labeled so that users can determine the variable names that correspond to the data points that they are interested in. The value labels are also provided and correspond to those variables that are dichotomous in nature.

Data users will find a table of contents indicating the page number for each section of the derived maltreatment dataset. These sections are broken down by the number (and indicator variables) of records, allegations, and substantiations. Please see RNAB Codebook for coding specifications.

#### Limitations of this Document

- The derived variables included in this document were derived using specific time frames beginning at age 2. The time frames beginning at age 4 and forward are based on the date of the interview. If an interview was not conducted, then the birth date is used in place of interview date. Referrals made prior to the child's birth are not included in these derivations.
- The derived variables only utilize the MMCS (i.e., Barnett).

## Variable Descriptions and Formats

Derived Maltreatment Dataset: MLTX			
Variable Name	Label	Derivation	Coding if Categorical
ID	LONGSCAN Subject ID	--	--
CENTER	LONGSCAN Field Center	--	EA = Eastern MW = Midwest SO = South SW = Southwest SE = Northwest
<p>The dates of interviews are used as time frame references for all variables with date ranges (e.g., number of records between age 4 and 6) except for the birth to age 2 time frame (which is based on the birth date). If an interview was not conducted, then the birth date of the child is used in place of the missing date.</p>			
<p style="text-align: center;"><b>Age of Child at First Referral</b></p> <p>A variable is created to indicate the age of the child at the first CPS referral (RNA/RMNB/RMNC5). Note that one variable excludes referrals containing only MMCS codes of 700 and/or 800 (AGE_REPT) and one variable includes all MMCS abuse types (AGEFSTRF).</p>			
<p>AGE_REPT = Age of child at first referral AGEFSTRF = Age of child at first referral for referrals of any (non-missing) MMCS type</p>			
<p style="text-align: center;"><b>Date &amp; Status of Last Review</b></p> <p>These variables indicate the date of the last review and age of the child at the time of the last review.            *The date of the last review is based on the date the RNA/MB/MC form was completed            *Status of last review is based on items RMNB/C2a, RMNB/C2, RMNB/C4, and RMNB/C6</p>			
DATE_REV	Date of last review		
STATREV	Status of last review 0 = no records found 1 = records found 2 = no consent to review		

### Count of records by time point

Variables are created to indicate the number of records, regardless of maltx type, occurring overall (i.e., all available data for a participant at the time of the latest retrieval) and for each time point.

#### Time points

0-2 2-4 4-6 6-8 8-10 10-12 12-14 14-16 16-18 8-12 and 0-4

Records are counted if there is non-missing data for either the incident or referral date AND non-missing data for at least one of the following variables: RNA/B/C12a1-f1, RNA/B/C13a1-f1/RNA/B/C10a-l, RNA/B/C14a-e, RNA/B/C15a-c

Possible range of values = 0 - 99

NUMREC = Total Number of RNA/RMNB Records

REC0\_2 = # Records between Birth & 2

REC2\_4 = # Records between Age 2 & 4

REC0\_4 = # Records between Birth & Age 4

REC4\_6 = # Records between Age 4 & 6

REC6\_8 = # Records between Age 6 & 8

REC8\_10 = # Records between Age 8 & 10

REC10\_12 = # Records between Age 10 & 12

REC8\_12 = # Records between Age 8 & 12

REC12\_14 = # Records between Age 12 & 14

REC14\_16 = # Records between Age 14 & 16

REC16\_18 = # Records between Age 16 & 18

### Count of records for each maltreatment subtype for MMCS codes by time point

Variables are created to indicate the number of records for each maltreatment type overall and by all time points.

### Count of allegations for each maltreatment subtype for MMCS codes

Variables are created to indicate the number of allegations, for each maltreatment type for each time point.

Allegations are counted if there is non-missing data for either the incident or referral date AND non-missing data for at least one of the following variables: RNA/B/C13a1-f1. Possible range of values = 0-99.

### Count of substantiations for each maltreatment subtype for MMCS codes

Variables are created to indicate the number of substantiations, for each maltreatment type for each time point.

Substantiations are counted if the corresponding maltreatment type in the findings section has a conclusion code of 1 (founded/substantiated ) or 3 (indicated/suspected ). Possible range of values = 0-99.

Maltreatment variables (substantiation) – RNA19a2-f2

Conclusion variables – RNA19a1-f1

### Expanded Hierarchical Type

**Please Note:** *There is no specification for how to treat variables for subjects with NO maltreatment record. In the derivations below, if the subject does not have a maltreatment record in the dataset (NUMREC = 0) or do not have a record for a particular time frame, then the variable(s) should be set to missing. Another important distinction is that codes of 700 and 800 are disregarded and not coded into a hierarchical type. Codes of 600 (moral/legal neglect) were considered 'neglect'. Codes of 600 were NOT included in derivations of Neglect for any variable in Volume 1 (sections 1 – 5). The EXPANDED TYPOLOGY variables are later used to derive the variables indicating whether the child had one type or multiple types of abuse (single vs. multiple types).*

EXPANDED MALTREATMENT TYPE will be coded into 6 categories:

1. Sexual Abuse Only (code = 200, or 200 AND 500)
2. Sexual Abuse & Other (code = 200 AND physical abuse, neglect, emotional maltreatment, or moral/legal)
3. Physical Abuse Only (code = 100-109 or 100-109 AND 500)
4. Neglect Only (code = 300-305, 400-403, or 600 or [300-305, or 400-403, or 600 AND 500])
5. Physical Abuse & Neglect (code = Physical Abuse AND Neglect, or Physical Abuse AND Neglect AND Emotional Maltreatment)
6. Emotional Abuse Only (codes = 500)

### Single vs. Multiple Types of Maltreatment

**Please Note:** The Expanded Hierarchical Type variables from above are used to derive the variables indicating whether the child had one type or multiple types of abuse (single vs. multiple type).

IF EMTxx variable = 2 or 5 then SVMxx variable = 1 (multiple type)

IF EMTxx variable = 3, 4, or 6 then SVMxx variable = 0 (single type)

### Maximum Severity

**Please Note:** These variables include algorithms for physical abuse, sexual abuse, failure to provide, lack of supervision, and emotional abuse; maltreatment allegations of 600, 700, and 800 were excluded. Subjects with NO maltreatment records were also excluded. Therefore, no specifications were provided for missing data. If a subject had one or more maltreatment records, but not for a particular time frame, all maximum severity values were set equal to '0'. Also, if there was a referral but no allegation data, the referral was excluded. In the current derivation, the same exclusions will be applied. Any subject with no record (i.e., referral) in the dataset will have values = for all of the following derived variables.

Maximum Severity is the highest severity rating given for a particular type of maltreatment in a particular time frame.

Maltreatment types are:

Physical abuse = 100-109

Sexual abuse = 200

Failure-to-Provide = 300-305

Lack-of-Supervision = 400-403

Emotional Maltreatment = 500

Initial Severity Levels for each maltreatment type:

Physical abuse: 1-6

Sexual Abuse: 1-5

Failure-to-Provide: 1-5

Lack of Supervision: 1-5

Emotional Maltreatment: 11-15, 21-25, 31-37, 41-45, 51-5

## Developmental Chronicity

Two chronicity variables are calculated. The first describes the period from birth to age 9.5 years. The second, birth up to age 15. The general specifications for these variables were taken from Job Us0280, and provided by the Seattle Site. Note that *any subject without a maltreatment record, during the time frames of interest, were excluded. Therefore, no specifications were provided for missing data. In the current derived variables, if a subject does not have a maltreatment record then the variable is set to missing. Note that allegation types of 0, 700, and 800 were excluded. The developmental chronicity variable is inclusive of all maltreatment types except 0, 700, and 800.*

*Chronicity variable is based on a time frame of birth to age 9.5. Only one variable will be created.*

*Time periods for the birth to age 9.5 variable are defined as:*

- 1. 9 months prior to date of birth – 1.4999 years*
- 2. 1.5 years to 2.999 years*
- 3. 3.0 years to 5.999 years*
- 4. 6 years to < 9.5 years*

*Situational = referrals occur in only one developmental period*

*Limited Episodic = referrals occur in more than one developmental period – but not consecutive periods*

*Limited Continuous = referrals occur in ONLY two consecutive developmental periods*

*Extended Episodic = referrals occur in two consecutive periods with one intervening period where no referrals occurred, followed by a period when one or more referrals occurred*

*Extended Continuous = referrals occur in three or more consecutive periods*

*Time periods for the birth up to age 15 variable are defined as:*

- 1. 9 months prior to date of birth – 1.4999 years*
- 2. 1.5 years to 2.999 years*
- 3. 3.0 years to 5.999 years*
- 4. 6 years to 8.99 years*
- 5. 9 years to 12.99 years*
- 6. 13 years to 14.99 years*

*Situational = referrals occur in only one developmental period*

*Limited Episodic = referrals occur in more than one developmental period – but not consecutive periods*

*Limited Continuous = referrals occur in ONLY two consecutive developmental periods*

Domestic Violence	
Variables were created to indicate the occurrence and frequency of occurrence, by time point, for referrals and substantiations in which domestic violence was either the basis for referral or was noted as a risk factor.	
The Domestic Violence code is subsumed under the Emotional Maltx Code (= 500) – the corresponding severity code must be either 25 or 42 to be an allegation of DV 25 = ‘the caregiver allows the child to be exposed to the caregiver’s extreme but nonviolent marital conflict’ 42 = ‘the caregiver allows the child to be exposed to extreme marital violence in which serious injuries occur to the caregiver’	
Domestic Violence as a risk factor is indicated on item 14b (for allegations) and 20b (for substantiations). For these, the narrative must specifically state that DV is a component of the allegation (see RNA/MB/MC codebook)	
Count of Records in which DV was the subject of an allegation	
MCDV02	# of MMCS DV records age 0-2
MCDV24	# of MMCS DV records age 2-4
MCDV04	# of MMCS DV records age 0-4
MCDV46	# of MMCS DV records age 4-6

MCDV1416	# of MMCS DV records age 14-16
MCDV1618	# of MMCS DV records age 16-18
Count the number of records (by time frame) in which there was a MMCS code of 500 with corresponding severity codes of 25 and/or 42	

Count of Allegations in which DV was the subject of an allegation		
MDV02A	# MMCS DV Allegations age 0-2	Count the number of allegations within and across reports (by time frame) where any MMCS allegation code = 500 and the associated severity code = 25 or 42
